

Procedure: **Physician Performed Microscopy Procedures (PPMP)**

1/14/05 Changes to the **Grading/Remediation** section:

Prior version:

Successful completion of a competency assessment - obtain a score of 80% in each area being tested.

- If the provider scores less than 80%, he/she will, on the first occurrence be encouraged to review the subject material using the Lab Training Library which is available on CD-ROM through the POCT program.
- If the providers scores less than 80% on two consecutive assessments, he/she will be required to provide evidence that they have successfully completed remediation by submitting a post-training test from the Lab Training Module.

Update as of 1/14/05:

Successful completion of competency assessment and proficiency testing challenges is required. For each set of test questions, providers are permitted one incorrect answer (ie, with 5 samples, minimum passing score is 80%; with 3 samples, minimum passing score is 66%).

- Providers scoring less than the minimum passing score will, on the first occurrence, be encouraged to review the subject material. Providers may select educational materials of their choosing, or use the Lab Training Library which is available on CD-ROM through the POCT program.
- Providers scoring less than the minimum passing score on two consecutive challenges will be required to provide evidence that they have successfully completed remediation by submitting a post-training test from the educational materials that they used.
- If a provider's scores are significantly or consistently below passing, or the UMG POCT program may require specific remediation activities, which may include specific printed materials and/or in-person training sessions conducted at RWJMS.
